**Filter set for upgrading your Starter Kit Pro – for even more creativity on your photo projects**

▸ Soft graduated filter in the intensity GND8 (3 stops / 0,9) made out of Gorilla®* glass
  – For balancing differences in brightness within one scene, such as sky and soil
  – Use two Soft GND filters at the same time and insert them in opposite directions to darken the sky and for example the water surface simultaneously
▸ Neutral density filter in the intensity ND1000 (10 stops, 3.0) made out of Gorilla®* glass
  – To extend the exposure time for creating flowing and wiping motion
  – Get rid of people or other moving objects on your photo
  – Combine the ND filters with each other to get an even longer exposure time or use them separately
▸ Reverse graduated filter in the intensity GND8 (3 stops / 0,9) made out of Gorilla®* glass
  – Darkest coating part in the middle of the filter
  – Ideally used for sunrise or sunset
▸ Combine the different filters with each other according to your photo scene
▸ Used with the Rollei Pro Square Filter Holder (already part of the Universal Starter Kit Pro or available separately)
▸ Suitable for landscape, architecture, long exposure, city sky light, sunset or sunrise photography
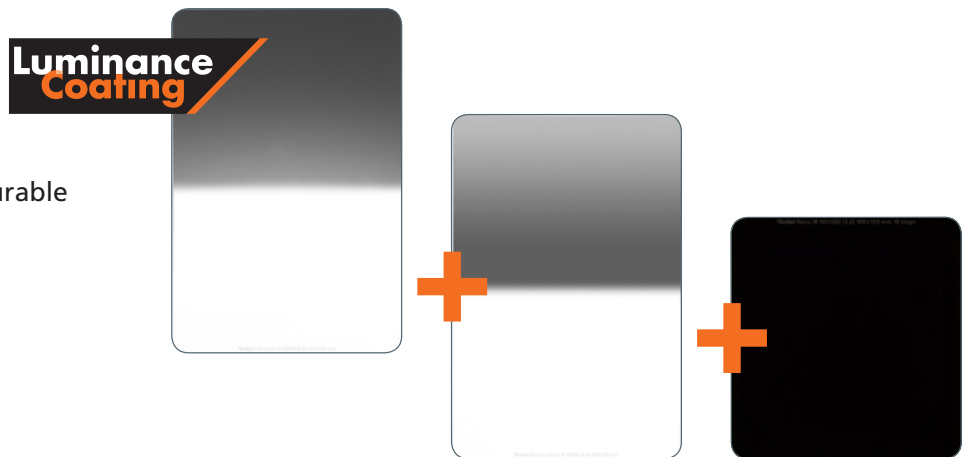

Luminance Coating

1. Gorilla®* glass
▸ Extremely robust and durable
▸ High translucency
▸ No optical distortion

2. Luminance Coating
▸ Highest colour fidelity
▸ Low reflections
▸ Scratch-resistant

3. Engineered & Quality Controlled In Germany
▸ Strict technical guidelines
▸ Individual quality control in Germany
▸ Special measuring procedure

Engineered & Quality Controlled in **Germany**
