

2-in-1 combination of variable ND filter and CPL filter

- ▶ Reduces the reflection from non-metallic surfaces
- ▶ Intensifies color saturation and contrast
- ▶ Adjustable ND filter for a variable reduction of light
- ▶ Variable density of ND2 - ND32
- ▶ High translucency
- ▶ No optical distortion
- ▶ Water, oil and stain repellent, scratch resistant
- ▶ For long exposures, flow and wipe effects
- ▶ Available in diameters 58, 62, 67, 72, 77 and 82 mm

Modus operandi

The combination of a variable ND filter and polarizing filter enables the simultaneous use of two filters with different modes of action. The polarizing filter reduces the reflection from non-metallic surfaces and helps to reveal the original color and texture of the object.

A variable fader ND filter combines the features of a classic ND filter with a continuously variable dimming. With this type of filter, the amount of light reduction can be easily adjusted according to the requirement of the scenario.

Scope of delivery

1x Polar:ND+ Filter, storage box
