

The Rock Solid filters are combining an extreme robustness with highest color fidelity.

1. Unbreakable¹⁾ Coating

What makes the Rock Solid Filters special is their enormous strength. Thanks to the special coating on both sides the filters are extremely robust and durable. If the filter accidentally drops out of your hands while you try to insert it into the filter holder, this will not lead to any problem anymore. The coating protects the filter so that you can still use it.

- ▶ Break-proof
- ▶ Pressure resistant
- ▶ High toughness
- ▶ Scratchproof
- ▶ Highest colour fidelity
- ▶ Low reflections

2. Gorilla[®]* Glass

Thanks to its unique surface coating, the filter glass resists even the most adverse environmental conditions such as scratches and shocks or constant contact with the material. Distortion-free and highly light transmissive, this special glass is used for particularly high-quality photo products.

- ▶ High translucency
- ▶ No optical distortion
- ▶ High color fidelity

3. Engineered & Quality Controlled In Germany

- ▶ Strict technical guidelines
- ▶ Individual quality control in Germany
- ▶ Special measuring procedure

Modus operandi

- ▶ A grey graduated filter is used to balance the difference in brightness of the horizon.
- ▶ The hard GND filter is generally used for taking shots when there is a fairly clear border between darker and light surroundings.
- ▶ This filter then has the same effect as a grey filter at the upper border. Towards the centre, the grey nuancing reduces just slightly, phasing away from the centre of the filter downwards with a small transition until transparent.

Technical data

Grey graduated filter	Hard IR GND4	Hard IR GND8
Optical density	0.6	0.9
F-Stop reduction	2 stops	3 stops
Material	Gorilla [®] * Glass	

¹⁾ The Rock Solid filters can drop down up to 3 and 10 times from a height of 1.2 meters before they break. But please note as these filters are made out of coated glass, damages or breaking are not completely impossible. We advise you that you should not throw these filters by purpose to prevent any damages.
