

The best filters Rollei has ever built

- ▶ Reverse graduated filters are used at sunrises and sunsets
- ▶ Ultra-fine coating ensures razor-sharp images – even with 150 MP high-end cameras
- ▶ Exemplary colour fidelity – capturing nature as it is seen by the eye
- ▶ Impressively clear images thanks to approx. 99.5 percent absence of reflection
- ▶ Diamond-like scratch resistance – extremely hard surface coating for optimum protection
- ▶ Extremely temperature resistant – tested in scorching heat and freezing cold
- ▶ Original Gorilla®* glass – legendary resistance and break resistance

Modus operandi

- ▶ GND filter is the abbreviation for "graduated neutral density filter", also termed grey graduated filter.
- ▶ A grey graduated filter is used to balance the difference in brightness of the horizon.
- ▶ The reverse grey graduated filter does not have any uniform grey distribution, but rather a grey gradation that in the middle of the filter runs upwards from dark-grey to light-grey and runs downwards, ending in transparency.
- ▶ This type of filter is much used to take shots of the sunset and sunrise. The filter is particularly effective when the sun is at the point where it meets the horizon and the light is strongest in the centre of the subject.

Technical data

Grey graduated filter	Reverse IR GND8
Optical density	0.9
F-Stop reduction	3 stops
Material	Gorilla®* Glass
Available in the widths	100 mm and 150 mm

Subject to change without notice. *Gorilla® is a registered trademark of Corning Inc.

Reverse GND8/150 mm
